## MILLER LOCK COMPANY

---

### Miller Lock Company Plant in Philadelphia

Here, raw steel and brass are made into salable, profitable merchandise—merchandise that has an important mission in the world.

Miller Locks have been on the market for fifty-three years.

From the first they have been made to unvarying standards of accuracy, strength and security.

The growth of the institution—from two or three men working in a rented room to a highly organized factory capable of producing a million locks a month—is based on its exacting standards of workmanship.

Today you see countless millions of Miller padlocks, those little units of concentrated might, protecting life and property in every corner of the globe.

So widespread is the demand for padlocks bearing this fine old Miller mark, that in America alone, there are twenty thousand stores through which flow a steady stream of thousands of Miller Locks every day.

---

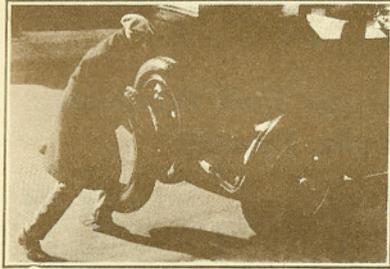

---

---

## PHILADELPHIA, U. S. A.

---

---

### The Need for Better Protection Among Motorists

It is figured that over three hundred million dollars (\$300,000,000) worth of property was stolen by automobile thieves alone last year.

The Miller Lock Company has had a count made by representatives in all parts of the country of cars protected by locks as compared to those without. Out of thousands examined there were 54.1 per cent without lock protection of any kind. Is it any wonder that there is such great loss of automobile property?

The fifteen million automobiles and trucks now in operation call for several padlocks each—for spare tires, tool boxes, garage doors and other uses.

### What the Law Says

People who complain about increasing dishonesty, or inefficient police force, ought to remember that unprotected autos and bicycles invite theft. What other kind of valuable property actually helps the thief escape?

---

---

## MILLER LOCK COMPANY

---

---

### Miller Padlocks Are One of the Most Profitable Lines You Can Handle, Because

1. There is a big and ready market—as referred to on the preceding page.
2. Miller padlocks give you quick turnover. This is brought about by several forces working together, as—the unmistakable quality and half century reputation of the locks themselves—efficient store display devices, *i. e.*, panels, stands and cartons—counter and window display cards, booklets, newspaper electros and other sales helps—National Consumer advertising in the *Saturday Evening Post*, *Country Gentleman*, etc.
3. Padlocks sold from Miller displays require little attention. Suggested re-sale prices are given on back of panels and stands. Re-ordering is easy. Miller locks are carried by leading jobbers everywhere.
4. The margin of profit is large. It averages better than fifty per cent.

What line could you stock that would give you as much profit on as small an investment?

---

**MILLER LOCK COMPANY**

---

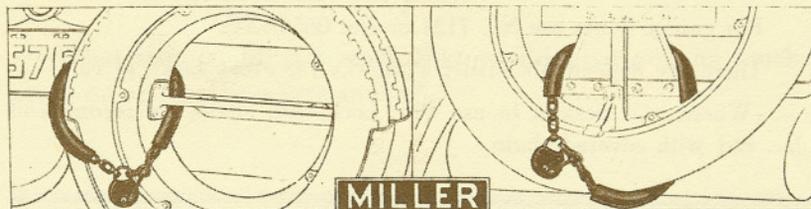

**No. 861 Tire Lock Chain**

The flat link steel chain fits snugly around TIRES, FRAME, WHEEL, etc., and provides convenient and inexpensive protection against theft of CAR or SPARES. The chain is of standard length, 36 inches, and is heavier and more substantial than the average popular low-priced tire chain. The chain cover is of much higher quality than usually supplied on this price chain.

No. 19 is one of the best medium priced Miller padlocks, with snappy action, double locking shackle and the desirable Ward and Lever mechanism. The padlock is fastened to the chain by a special device, "patent applied for." This makes the chain, lock and cover one unit so there is no possibility of dropping or losing the padlock in changing tires, etc.

The illustration shows an effective store display. Most stores will have the necessary display bracket, but where lacking we will be glad to furnish the bracket at a cost price of fifteen cents each.

This item should show the average dealer a substantial profit.

### Special Padlock Covers

Miller Padlock Covers are often found to be a great convenience. They are especially desirable for padlocks used on AUTOMOBILES. They protect the fine finish of the car from scratching or chipping. They help keep dust and dirt from the lock mechanism. Rattling is prevented, and they minimize the danger of anyone tampering with the lock.

The cover shown at the left above is of fine grained pliable leather with convenient snap and is supplied with Padlocks Nos. 66, 86, 0197, and 0850G.

The cover illustrated on padlock at right above is made of rubber and is supplied with locks Nos. 40, 40LS, 41, 41LS, 42, 44, 44CS and 44SS.

When ordering padlocks with covers, signify by putting letter K before each number, as No. K86.

**No. 23 Padlock Eyes**

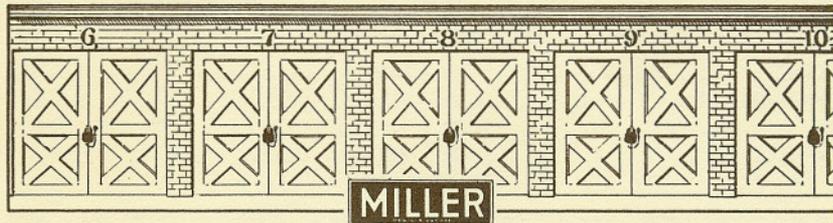

Two in a Set

 Free Download From [www.Antique-Padlocks.com](http://www.Antique-Padlocks.com)

These heavy forged steel padlock eyes meet a decided need. Ordinarily the padlock holds securely enough—the weak point is the fastening device. The average staple and hasp used on doors is so light that very little resistance is offered to a determined thief.

Their extra strength and the fact that they are fastened on by screws that are inaccessible when the door is closed make these padlock eyes genuinely secure. They are especially adapted for garage doors and can be used with padlocks Nos. 7121, 66 and 0650GXC to best advantage. They are easy to put on—see illustration above.

SIZE AND WEIGHT—2½ inches by 3 inches. Finish, Miller ebony black. Weight, per set of two, 1⅞ lbs. Packed one set to a box; 6 sets in carton.
